

# Facility Marking & Labeling

**GRAINGER®**

Proper plant markings and appropriate signage are two of the keys to providing a safe working environment. To comply with industry standards, you must be able to identify potential hazards and communicate operational messages.

Through the **Grainger Service Provider Network**, we can provide you with appropriate signage for your facility and help you realize the following benefits:

- Compliance to industry standards for signage
- A cost-effective and quick way to complete a marking project
- A reliable source to evaluate current facility signage

## **Service Offerings**

### **Facility Assessment and On-Site Audit**

#### **A thorough walk-through of your facility to:**

- Evaluate current plant marking and identification practices of pipe marking, safety signs, and tank and vessel signs based on regulatory requirements, industry standards, and good engineering practices.
- Identify and record the specific markers required to make each facility more visually instructive

#### **A formal report that provides:**

- Evaluation and documentation of our existing plant marking with photographs to illustrate the items noted during the walk-through
- Evaluation of the strengths and weaknesses of your existing labeling and marking program
- Recommended corrective actions to become more visually instructive
- Suggest priorities for corrective action
- A comprehensive list of signs and markers needed to upgrade plant marking
