

CAULK-EZ® Caulk Tooling Spray

Issue: Facility managers and contractors use caulks and sealants that are difficult to work with. When using silicone, acrylic and polyurethane products, tooling a bead of caulk that provides superior protection often results in both an uneven/ unattractive bead and a time consuming clean-up. Latex caulks are often substituted despite their inferior protection and durability simply because they are easier to use. A substandard bead compromises the protection it is intended to deliver as well as the appearance of items often representing substantial investments.

Application: CAULK-EZ® aerosol spray is a new, unique caulk tooling aid that enables caulk/sealant users to achieve a perfect bead without the mess while dramatically reducing caulking time. It is formulated for all caulks and sealants and prevents excess caulk from sticking to either your fingers or to the adjacent surfaces. It also delivers a perfect bead of caulk in terms of appearance and smooth edges thereby preventing cracking, peeling and leaking. It will not stain painted surfaces and when dry the adjacent surfaces can be painted. CAULK-EZ® is non-flammable, odorless and is safe for all surfaces. One can covers up to eight 10 oz. tubes (400 feet) of caulk and fits in a shirt pocket.

Recommendation: Grainger offers CAULK-EZ® Caulk-Tooling Spray as a tooling aid for all caulks and sealants.

**2.5 oz. CAULK-EZ®
 Caulk Tooling Aid
 Grainger Item #
 1MMT9**

Use to tool a perfect bead of caulk without the mess in a fraction of the time.

Caulk
 Apply a thin bead of caulk.

Spray
 Mist bead holding nozzle
 4 to 6 inches from surface.

Wipe
 Smooth caulk using finger
 or caulk finishing tool with
 medium pressure.
