

## Loctite® Seminars & Surveys Help Save Time, Labor, and Costs!

**Issue:** Catastrophic maintenance failures such as leaks and fastener loosening result in unscheduled downtime costing hundreds to thousands of dollars per hour. Most companies today are only using a couple of Loctite® products, which do not address all of the downtime issues associated with 70% of common catastrophic plant failures such as spun bearings, keyway wear, fretting corrosion, tape-fouled valves, hydraulic leaks, air leaks, gasket leakage, and fastener loosening.

Take the case of one Midwestern paper mill that had an ongoing problem with loosening of piping and conduit hangers causing leaky pipes and various electrical problems. After receiving instruction on Loctite® proactive/preventive maintenance techniques, plant maintenance personnel began to use Loctite® 290™ Wicking Grade Threadlocker on all their pipe and conduit hangers. This preventative maintenance measure reduced the leaks and electrical failures. According to the plant's maintenance supervisor, "It isn't enough to give the men tools, you have to train them in how to use them. That is what the Loctite® training did for us."

**Application:** No-charge Loctite® Seminars & Surveys address all of the downtime issues associated with catastrophic plant failures. This FREE one-hour workshop is conducted on site for plants with 6 or more maintenance workers by a certified Loctite® Adhesives & Sealants Specialist. Training is also tailored to meet the unique needs of each plant beginning with an on-site survey of the plant for the purpose of reviewing current maintenance processes and Loctite® product usage.

The only commitment is that each plant bring in enough Loctite® product inventory so that trained personnel walk away with the necessary "tools" in-hand to immediately put the training to use while it is still fresh in their minds. Grainger features several different Loctite® Kits designed to meet your specific needs.

**Recommendation:** One scheduled downtime hour can cost much more than the loss of a few man hours of effective training. Contact your local Grainger representative to schedule a FREE Loctite® Seminar for your plant.
