

Emergency Preparedness Rayovac® Portable Power and Lighting Products Provide Illumination for a Safe Environment

Issue: Providing a sufficient amount of portable lighting for every business associate/guest/patient etc., is critical in providing a safe environment in the event of power outages due to storms, disasters or “power grid” malfunctions.

Application: Most organizations need and must have an adequate supply of back-up alkaline batteries, flashlights and lanterns for emergencies to provide portable lighting in the event of power outages. Establishing a safe and secure environment using flashlights during a power outage reduces one’s stress and anxiety level by removing the uncertainties of darkness.

Recommendation: Grainger offers Rayovac® specific economical products to store as safety stock in the event of a power outage. The recommended storage of safety stock includes: one D size industrial grade flashlight for every 3 employees, one area lantern for every “gathering room” designated for groups of people to congregate and one Rayovac® resealable pack of 12 alkaline D size batteries for each flashlight. Adding several non battery operated crank flashlights to augment battery operated lights are also recommended to provide ample illumination in the event of emergencies.

Product Features & Benefits:

For more information about Rayovac®, contact your Grainger Representative, local branch, or go online to grainger.com to place your order.
