

Productive Workplace

Save time and money by tossing the bottle

Issue: The cost of bottled water is crippling to a company and the waste is cluttering landfills.

Application: Companies pay large dollars monthly for bottled water services when they could get equal or better quality water for pennies a gallon. Not to mention the storage of all these bottles in waiting and the empties. Also of note are larger apartment complexes or co-ops. These buildings / complexes have an inordinate amount of plastic bottles being brought in and therefore being brought out to the garbage. This increases costs. "Green" thinking and "Green" building are coming into popularity, provide your customers with the right products.

Recommendation: Aqua-Pure offers a full Range of Drinking Water Systems for Point-of-Use or Centralized Systems for larger facilities.

If water quality is unknown or suspect, protect yourself with the best!

Grainger offers a full range of Reverse Osmosis Systems and Ultraviolet Lights.

Product Features and Benefits:

Drinking Water Systems

- Latest in media technology allows for greater contaminant reduction
- Convert bottle coolers to bottle-less
- Great for multitasking such as a kitchenette. Can handle coffee makers, icemakers and water coolers

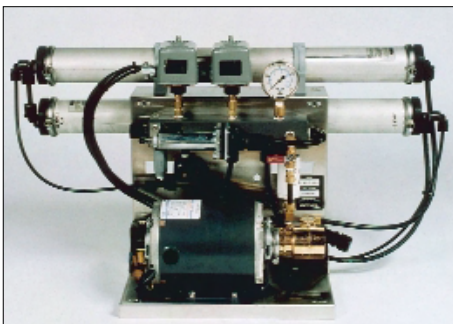

No. 5PR95

Reverse Osmosis Systems

- Reverse Osmosis Systems are capable of reducing most contaminants by 90-95% including arsenic

Available in a range of daily gallon requirements from 25 gallons per day to thousands of gallons per day.

No. 5PT14
