SharkBite® Push-Fittings™ Save Time & Money

Issue: Soldering is a time-consuming and skill-intensive method for making typical plumbing joints, plus soldering can not be done in wet conditions (therefore requiring extra drying time during repair jobs). In addition, many situations require connecting different pipe materials (copper, CPVC and/or PEX).

Application: Residential and commercial plumbing, for both potable water and hydronic heating systems, where copper tubing and/or CTS PEX and CPVC pipe are used. Available sizes from 1/2" to 1", for both new installations and repair jobs in wet or dry conditions.

Recommendation: Grainger offers SharkBite® Push-Fittings™ for making fast, proven plumbing joints. It's the fastest, easiest way to join copper, CPVC or PEX pipe in any combination, with no soldering, glue, unions or clamps required. Just insert the pipe and the stainless steel teeth bite down and grip tight, while a specially formulated O-ring compresses to form a perfect seal. With an extensive line of standard and specialty fittings, the SharkBite Connection System is ideal for any job where speed, versatility and strong joints are required.

For more information about SharkBite Push-Fittings and the entire SharkBite Connection System, contact your Grainger Representative, local branch, or go online to grainger.com to place your order and see the complete line of Cash Acme SharkBite products.

Product Features & Benefits:

Proven Push-Fit Connection For Speed and Ease of Use

- No soldering, glue, unions, or clamps required
- Use for both wet or dry conditions
- Reduces downtime and labor costs
- Simple disconnect clip allows fitting to be changed or reused

Fits Copper Tubing, and CTS CPVC, and PEX

- Connects all three types of pipe in any combination
- Integral tube liner for PEX installations
- Extensive line of standard and specialty fittings, plus check and ball valves

Design Certified and Agency Listed

- Fittings certified to 200 PSI and 200°F (93°C)
- Approved to be used underground and behind walls without access
- Inspector friendly, peace of mind
- Design certified to ANSI/NSF-61 and ASSE 1061 product standard for use in potable water and hydronic heating water distribution.

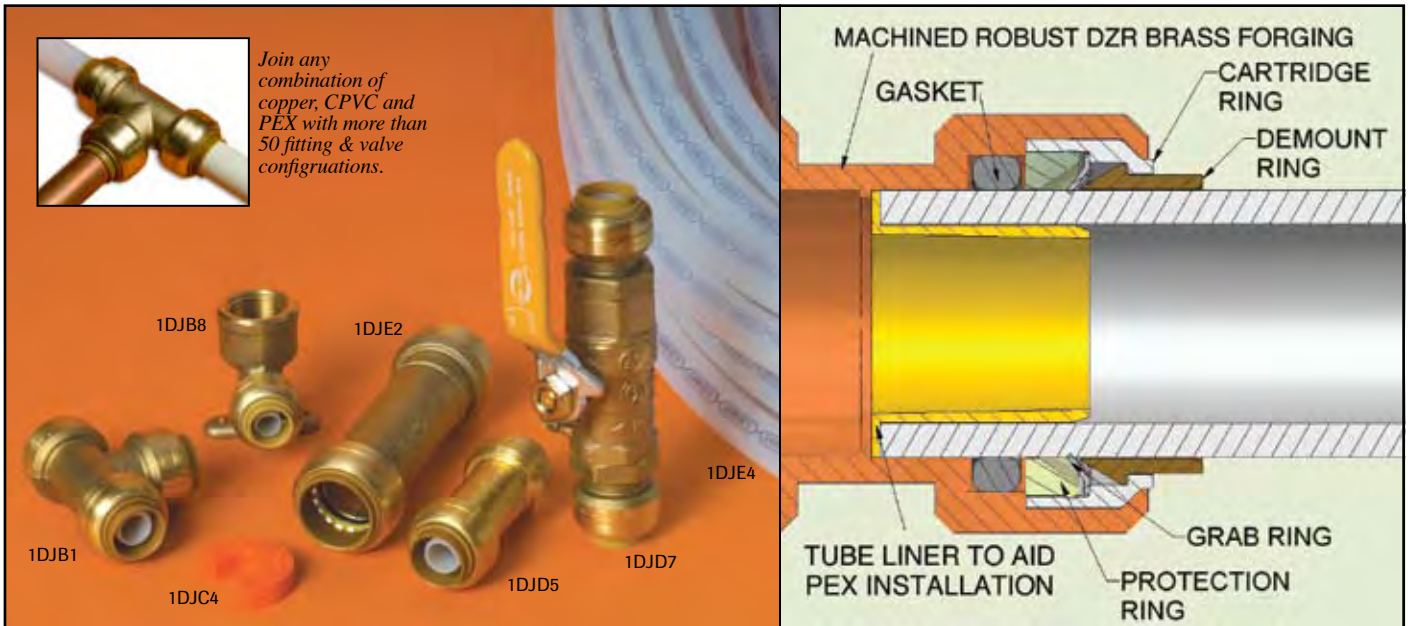

Quality Engineered and Manufactured

- Compact, robust DZR brass body- foundation of a strong, corrosion resistant, durable fitting
- Integrated design means no loose components, ensures secure, reliable connection
- Proven durability and quality
