

Help prevent premature power transmission failures in harsh manufacturing environments.

Issue: Harsh manufacturing environments contain dirt, dust and contaminants that may cause premature failures and corrosion of your power transmission equipment, creating a need for constant lubricating and cleaning.

Application: Decrease maintenance costs and downtime by selecting products that are designed to endure through harsh manufacturing environments.

Recommendation: Grainger offers power transmission products designed for extreme environments. Keep your drive systems running smoothly with aluminum linear bearings, stainless steel washdown bearings, self-lubricating pillow block bearings, corrosion resistant roller chain, acetal shaft collars, stainless steel couplings and washdown disc motor brakes.

Standard Linear Bearing
No. 2CPD1

Rigid Shaft Coupling
No. 2AMH7

Set Screw Shaft Collar
No. 2AEF6

Disc Motor Brake
No. 1L388

Washdown Bearing
No. 1VM55

Stainless Steel Roller Chain
No. 6L076

Linear Pillow Block Bearing
No. 2CPG7
