Miller DuraSeal™ Self-Retracting Lifeline
Designed to lower your cost of ownership by keeping it in the field

- Prevents contaminants from entering the unit with highest industry rated sealed technology IP69K
- Built to last reusable brake design withstands multiple falls
- Quick, low cost repair is achieved with field replaceable lifeline
- Reduces fatigue and increases productivity with units up to 30% lighter than competitive sealed units
- Product service life is extended in the harshest environments with corrosion resistant components
The new patent-pending Miller DuraSeal™ Self-Retracting Lifeline (SRL) is designed to perform in the harshest environments including onshore and offshore oil and gas, mining and petrochemical. The sealed technology, reusable brake system, field replaceable lifeline and corrosion resistant materials keep the product in the field to lower your cost of ownership.

**Miller DuraSeal™ Competitive Advantages**

**Prevents contaminants from entering the unit with highest industry rated sealed technology IP69K**
In addition to meeting IP68, the Miller DuraSeal™ meets IP69K – a more stringent test requiring close range high-pressure/high temperature spray downs. The Miller DuraSeal design entirely seals and protects the brake system, power spring and bearings to ensure these components are never exposed to debris, water or chemicals.

**System built to last, withstanding multiple falls**
The robust brake design withstands multiple falls, keeping the Miller DuraSeal™ in the field, lowering your cost of ownership.

**Provides quick, low-cost repair**
The Miller Rapid Replace field replaceable lifeline can be performed by the end-user in the field or an authorized Miller Repair Center.

**Provides easier installation and transport**
The lightest weight sealed SRL offering includes models up to 30% lighter than competitive sealed SRLs for easier installation and transport.

**Enables quicker, easier installation and provides protection from rain**
Models with mounting plate for attachment to a 4-hole bolt pattern common on oil and gas rigs include built-in spacers for easier installation. Waterproof design protects cable from rain.

**Provides protection for a wider range of workers**
The 420 lb. (189 kg) weight capacity provides protection for a wider range of workers carrying heavy tools.

**Increases service life with new spring design**
The power spring design keeps tension on the line, increasing the life service of the unit.

**Prevents brake disengagement during a fall**
Anti-ratcheting brake design provides positive brake engagement.

**Lowers cost of ownership with no annual factory recertification**
The robust design does not require annual recertification.* This keeps the product in the field lowering cost of ownership and increasing productivity.

*Except in Canada where the Canadian Standards Association require annual recertification.
Field Replaceable Lifeline

The Miller Rapid Replace Line provides for quick, low-cost repair that can be performed by users in the field or an authorized Miller Repair Center.

For full step-by-step instructions, visit millerfallprotection.com

Rotating Anchor Loop
Balances the unit to ensure the load is centered in the event of a fall.

Mounting Plate with Integral Spacers*
Integral spacers provide quicker, easier installation. A gasket between the housing and mounting plate prevents rain from entering the cable side of the unit.
*Applies to models with mounting plates only

Aluminum and Stainless Housing
Designed with corrosion resistant components, the Miller DuraSeal provides ultimate durability extending the product’s service life.

Ergonomically Designed Carrying Handle/Secondary Anchorage
Provides a comfortable well-balanced feel and is approved for use as a secondary anchorage attaching the SRL to the structure using a tether line.

Miller Rapid Replace Lifeline
The field replaceable lifeline provides for quick, low-cost repair that can be performed by the end-user in the field or an authorized Miller Repair Center.

Equipped with Ultra-high Frequency RFID
Enables asset and inspection tracking.

Lifeline Grip
Optimized to provide a solid grasp of the lifeline when connecting to the user’s harness.

Swivel
Built-in swivel prevents the lifeline from twisting.

Load Indicator
Activates in the event of a fall.

3,600 lb. Gate
The 3,600 lb. gate-strength hooks meet the most recent industry standards.
