AC Motor Speed Control

Model 13E661
PLEASE READ AND SAVE THESE INSTRUCTIONS. READ CAREFULLY BEFORE ATTEMPTING TO ASSEMBLE, INSTALL, OPERATE OR MAINTAIN THE PRODUCT DESCRIBED.

PROTECT YOURSELF AND OTHERS BY OBSERVING ALL SAFETY INFORMATION. FAILURE TO COMPLY WITH INSTRUCTIONS COULD RESULT IN PERSONAL INJURY AND/OR PROPERTY DAMAGE! RETAIN INSTRUCTIONS FOR FUTURE REFERENCE.

PLEASE REFER TO BACK COVER FOR INFORMATION REGARDING DAYTON’S WARRANTY AND OTHER IMPORTANT INFORMATION.

Installation & Operation Manual

Model 13E661

AC Motor Speed Control • Hybrid Drive™

for 1/8 HP thru 1HP 3-Phase AC Motors rated 208 – 230 VAC, 50* & 60 Hz

NEMA 1 / IP 50

Operates from 115* and 208/230 Volt 50/60 Hz AC Line
Variable Speed / Soft-Start with Electronic Motor Overload Protection

*IMPORTANT

This drive is factory set for:

1. 60 Hz Motors,
   for 50 Hz motors, see Section 7.4, on page 17 and 18.
2. 208/230 Volt AC line input,
   for 115 VAC operation, see Section 7.1, on page 16.

See Safety Warning, on page 5.

The information contained in this manual is intended to be accurate; however, the manufacturer retains the right to make changes in design which may not be included herein.

21. Slip Compensation Trim pot (COMP) Range     22
22. Current Limit Trim pot (CL) Range           23
23. $^2$ t Trip Time vs. Motor Current          23
Items included in this package:
Model 13E661 Hybrid AC Drive, Installation and Operation Manual, Hardware Bag (containing Trimpot Adjustment Tool, AC Line Input Voltage Selection Jumper, and an extra Feed-Through Bushing), CE Approved Product Information Card, Warranty Registration Card and Mounting Template.

UL Notice

230 VAC Controls
Suitable for use on a circuit capable of delivering not more than 5 kA RMS Symmetrical Amperes, 230 volts maximum.
Use Copper Conductors Rated 75 °C.
Suitable for operation in a maximum surrounding air temperature of 40 °C.
1. QUICK-START INSTRUCTIONS

Important – You must read these simplified instructions before proceeding. These instructions are to be used as a reference only and are not intended to replace the details provided herein. You must read the Safety Warning, on page 5, before proceeding.

Note: This drive contains bus capacitors which must be reconditioned if the drive has been in storage for over one year. To recondition the bus capacitors, apply the AC line, with the main speed potentiometer set to zero, for a minimum of 30 minutes.

See Figure 1. Also see Section 4 – Important Application Information, on page 13.

WARNING! Disconnect main power before making connections to the drive.

Note: It is recommended that both Feed-Through Bushings be used to connect the drive. If signal wiring (for the Run/Fault Relay Output Contacts or for a remote Main Speed Potentiometer) is required, it is recommended that the extra Feed-Through Bushing (supplied with the drive) be used to replace the center Hole Plug. Standard 3/4" fittings (not supplied) can also be used in lieu of the Feed-Through Bushings.

1.1 MOUNTING INSTRUCTIONS –
See Section 5, on page 14.

1.2 AC LINE INPUT CONNECTION –
Connect the single-phase AC line input to Terminal Block TB1 (Terminals “L1”, “L2”), as shown in Figure 1. See Section 6.1, on pages 14 and 15.

Application Note – Do not connect this drive to a GFCI. If operation with a GFCI is required, contact our Sales Department.

Note: The drive is factory set for 208/230 Volt AC line input (Jumper J1 not installed). For 115 Volt AC line input, install Jumper J1 (supplied). See Section 7.1, on page 16.

1.3 AC LINE FUSING – It is recommended that a fuse(s) or circuit breaker be installed in the AC line. Fuse each conductor that is not at ground potential.
For the recommended fuse size, see Table 3, on page 9. Also see Section 6.1, on pages 14 and 15.

1.4 GROUND CONNECTION – Connect the ground wire (earth) to Terminal Block TB1 (Terminal “GND”), as shown in Figure 1, above.

1.5 MOTOR CONNECTION – Connect the motor to Terminal Block TB1 (Terminals “U”, “V”, “W”), as shown in Figure 1, on page 4. (Special reactors may be required for cable lengths over 100 ft. (30 m) – consult our Sales Department.). See Section 6.3, on page 15.

1.6 JUMPER SETTINGS – All jumpers have been factory set for most applications, as shown in Figure 4, on page 12. Some applications require setting of the jumpers in order to set the drive for a specific application. Jumper J2 must be set to match the horsepower of the motor being used. See Section 7, on pages 16 – 18.
1.7 **60 Hz and 50 Hz MOTOR OPERATION** – The drive is factory set for 60 Hz motor operation (Jumper J5 set to the “60Hz” position). For 50 Hz motor operation, set Jumper J5 to the “50Hz” position. See Section 7.4, on pages 17 and 18.

1.8 **PILOT LIGHT** – After applying power to the drive and setting the On/Off AC Line Switch to the “ON” position, the panel mounted Pilot Light will illuminate.

1.9 **DIAGNOSTIC LEDs** – After applying power to the drive and setting the On/Off AC Line Switch to the “ON” position, observe the PC board mounted LEDs for proper drive operation. See Section 10, on pages 20 & 21.

1.10 **TRIMPOT SETTINGS** – All trimpots have been factory set for most applications, as shown in Figure 4, on page 12. Some applications require adjustment of the trimpots in order to set up the drive for a specific requirement. See Section 11, on pages 21 – 23.

2. **SAFETY WARNING**

   **Definition of Safety Warning Symbols**

   - **Electrical Hazard Warning Symbol** – Failure to observe this warning could result in electrical shock or electrocution.

   - **Operational Hazard Warning Symbol** – Failure to observe this warning could result in serious injury or death.

   ![](ElectricalHazard.png) ![OperationalHazard.png]

   This product should be installed and serviced by a qualified technician, electrician, or electrical maintenance person familiar with its operation and the hazards involved. Proper installation, which includes wiring, fusing or other current protection and grounding can reduce the chance of electrical shocks, and/or fires, in this product or products used with this product, such as electric motors, switches, coils, solenoids, and/or relays. Do not use this drive in an explosion-proof application. Eye protection must be worn and insulated adjustment tools must be used when working with drive under power. This product is constructed of materials (plastics, metals, carbon, silicon, etc.) which may be a potential hazard. Proper shielding, grounding, and filtering of this product can reduce the emission of radio frequency interference (RFI) which may adversely affect sensitive electronic equipment. It is the responsibility of the equipment manufacturer and individual installer to supply this Safety Warning to the ultimate end user of this product. (SW 1/2006)

   The drive contains electronic Start/Stop circuits which can be used to start and stop the drive; however, these circuits are never to be used as safety disconnects since they are not fail-safe. Use only the AC line for this purpose.

   Be sure to follow all instructions carefully. Fire and/or electrocution can result due to improper use of this product.
Thank you for purchasing Model 13E661 Hybrid AC Drive. Dayton Electric Mfg. Co. is committed to providing total customer satisfaction by producing quality products that are easy to install and operate. This drive is manufactured with surface mount components incorporating advanced circuitry and technology. Model 13E661 Hybrid AC Drive is a variable speed control housed in a NEMA 1/IP50 enclosure. It is designed to operate 208 – 230 Volt 50 & 60 Hz 3-phase AC induction motors from 1/8 HP thru 1 HP. The sine wave coded Pulse Width Modulated (PWM) output operates at a carrier frequency of 16 kHz which provides high motor efficiency and low noise. Adjustable Linear Acceleration and Deceleration make the drive suitable for soft-start applications. The Motor Horsepower Selection Jumper allows the drive to be used on a wide range of motor horsepower (1/8, 1/4, 1/2, 3/4, 1 HP) without recalibration or programming.

Its user-friendly design makes the drive easy to install and operate. Setting the drive to specific applications is accomplished with selectable jumpers and trimpots, which eliminates the computer-like programming required on other drives; however, for most applications no adjustments are necessary. For more advanced programming, PC based Drive-Link™ software is available.

Main features include adjustable RMS Current Limit and $I^2t$ Motor Overload Protection. In addition, Adjustable Slip Compensation with Static Auto-Tune and Boost provides high torque and excellent load regulation over a wide speed range. Power Start™ delivers over 200% motor torque to ensure startup of high frictional loads. Electronic Inrush Current Limit (EICL™) eliminates harmful AC line inrush current. A Run/Fault Relay is provided which can be used to turn on or off equipment or to signal a warning if the drive is put into the Stop Mode or a fault has occurred.

Standard front panel features include an On/Off AC Line Switch, a pilot light for power On, and a Main Speed Potentiometer. Other features include PC board mounted diagnostic LEDs (Power On (ON), Drive Status (ST) and Overload (OL)), Barrier Terminal Blocks to facilitate wiring (AC line, motor, ground (earth), and Run/Fault Relay Output Contacts), adjustable trimpots (MIN, MAX, ACCEL, DECEL, COMP, CL), customer selectable jumpers (AC Line Input Voltage Selection, Motor Horsepower, Automatic or Manual Start and Reset2, Motor Frequency, Frequency Multiplier, and a Run/Fault Output Relay).

Optional accessories include: Forward-Stop-Reverse Switch2.

**Notes:** 1. UL approved as an electronic overload protector for motors. 2. The optional Forward-Stop-Reverse Switch is required for Manual Start.

### 3.1 STANDARD FEATURES

- **Simple to Operate** – Does not require programming. Uses trimpots and jumpers, which are factory set for most applications.
- **Dual AC Line Input Voltage (115 or 208/230 Volt AC Operation)** – Controls 208 – 230 Volt AC, 50 & 60 Hz, 3-phase motors from 115 or 208/230 Volt AC line. (Jumper J1 must be installed for 115 Volt AC line operation.)
- **Motor Horsepower Selection Jumper** – Allows the drive to be used on a wide range of motor horsepower (1/8, 1/4, 1/2, 3/4, 1 HP) without recalibration or programming.

---

This product complies with all CE directives pertinent at the time of manufacture. Contact Grainger Support Desk for Declaration of Conformity. Installation of a CE approved RFI filter is required. See RFI Filters and Chokes Selection Guide D-321 (Part No. A42027) for selection of filters to meet the Industrial or Residential Standard. Additional shielded cable and/or AC line cables may be required along with a signal isolator.
- **Diagnostic LEDs** – PC board mounted LEDs for Power On (ON), Drive Status (ST), and Overload (OL).

- **Run/Fault Relay Output Contacts** – Can be used to turn on or off equipment or to signal a warning if the drive is put into the Stop Mode or a fault has occurred.

- **Barrier Terminal Blocks** – Facilitate wiring of AC line, motor, ground (earth) and Run/Fault Relay Output Contacts.

- **On/Off AC Line Switch** – Panel mounted. Used to turn the power on or off to the drive.

- **Pilot Light** – Panel mounted. Indicates that power is applied to the drive and the On/Off AC Line Switch is set to the “ON” position.

- **Main Speed Potentiometer** – Panel mounted. Provides adjustment of motor speed.

- **Jumper Selection of Drive Output Frequency** – Increases the motor speed up to two times the rated RPM.

- **Compatible with GFClTs (with optional software).”**

### 3.2 PERFORMANCE FEATURES

- **Power Start™** – Provides more than 200% starting torque which ensures startup of high frictional loads.

- **Slip Compensation with Static Auto-Tune and Boost** – Provides excellent load regulation over a wide speed range.

- **Speed Range** – 60:1

### 3.3 PROTECTION FEATURES

- **Motor Overload (I²t) with RMS Current Limit** – Provides motor overload protection which prevents motor burnout and eliminates nuisance trips.*

- **Electronic Inrush Current Limit (EiCL™)** – Eliminates harmful inrush AC line current during startup.

- **Short Circuit** – Shuts down the drive if a short circuit occurs at the motor (phase-to-phase).

- **Regeneration** – Eliminates tripping due to bus overvoltage caused by rapid deceleration of high inertial loads.

- **Undervoltage and Overvoltage** – Shuts down the drive if the AC line input voltage goes above or below the operating range.

- **MOV input transient suppression.**

- **Microcontroller self monitoring and auto-reboot.**

*UL approved as an overload protector for motors.*

### 3.4 SELECTABLE JUMPERS (See Section 7, on pages 16 – 18.)

- **AC Line Input Voltage Selection (115/230 Volts AC)** (J1)

- **Motor Horsepower (1/8, 1/4, 1/2, 3/4, 1 HP)** (J2)

- **Automatic or Manual Start and Reset** (J3)

- **Frequency Multiplier (1X, 2X)** (J4)

- **Motor Frequency (50/60 Hz)** (J5)

- **“Run” or “Fault” Output Relay Operation** (J6)
3.5 TRIMPOT ADJUSTMENTS (See Section 11, on pages 21 – 23.)

- Minimum Speed (MIN)
- Maximum Speed (MAX)
- Acceleration (ACCEL)
- Deceleration (DECEL)
- Slip Compensation (COMP)
- Current Limit (CL)

Assembled in U.S.A.
Mfd. for Dayton Electric Mfg. Co.,
Lake Forest, IL 60045-5201 U.S.A.
For Repair Parts Call 1-800-323-0620
CON2: Used for optional Forward-Stop-Reverse Switch.*

The optional Forward-Stop-Reverse Switch is required for Manual Start.

Main Speed Potentiometer Terminals (P1, P2, P3).

Adjustable Trimpots (CL, MAX, MIN, ACCEL, DECEL, COMP).

J4: 1X or up to 2X Rated Motor RPM Operation.

J5: 60 Hz or 50 Hz Motor Operation.

J6: "Run" or "Fault" Output Relay.

J1: AC Line Input Voltage selection.

Install jumper for 115 Volt AC line input. See Figure 9, on page 16.

CON1: Used to connect optional accessories to the drive.

Diagnostic LEDs (Power On, Status, Overload).

CON2: Used for optional Forward-Stop-Reverse Switch.*

Main Speed Potentiometer Terminals (P1, P2, P3).

Adjustable Trimpots (CL, MAX, MIN, ACCEL, DECEL, COMP).

J3: Automatic or Manual Start and Reset Operation.*

J4: 1X or up to 2X Rated Motor RPM Operation.

J2: Motor Horsepower.

J5: 60 Hz or 50 Hz Motor Operation.

J6: "Run" or "Fault" Output Relay.

TB1: AC Line Input, Motor, Ground, and connections. See Figure 7, on page 15.

TB2: Run/Fault Relay Output Contacts.

* The optional Forward-Stop-Reverse Switch is required for Manual Start.
4. IMPORTANT APPLICATION INFORMATION

4.1 MOTOR WITH EXTERNAL FAN COOLING – Most totally enclosed fancooled (TEFC) and open ventilated 3-phase AC induction motors will overheat if used beyond a limited speed range at full torque; therefore, it is necessary to reduce motor load as speed is decreased.

Note: Some fan-cooled motors can be used over a wider speed range. Consult the motor manufacturer for details.

WARNING! Some motors have low speed characteristics which cause overheating and winding failure under light load or no load conditions. If the motor is operated in this manner for an extended period of time, it is recommended that the unloaded motor current be checked from 2 – 15 Hz (60 – 450 RPM) to ensure motor current does not exceed the nameplate rating. Do not use motor if the motor current exceeds the nameplate rating.

It is recommended that the drive be used with Inverter Duty or TENV motors.

Inverter duty and most totally enclosed non-ventilated (TENV) motors can provide full rated torque over an extended speed range without overheating. See Figure 5.

If external fan cooling is provided, open ventilated motors can also achieve an extended speed range at full rated torque. A box fan or blower with a minimum of 100 CFM per HP is recommended. Mount the fan or blower so the motor is surrounded by the airflow. See Figure 6.

4.2 ELECTRONIC MOTOR OVERLOAD PROTECTION – The drive contains Modified $I^2t$ Overload Protection.* Part of this function consists of a Current Limit (CL) circuit, which limits the drive current to a factory preset level of 160% of the rated drive current. The CL Trim pot is used to recalibrate the drive current from 60% thru 200%. The Power Start™ circuit provides an overshoot function that allows most motors to develop more than 200% of starting torque and breakdown torque.

Standard $I^2t$ is undesirable because it causes nuisance tripping. It allows a very high motor current to develop and will turn the drive off after a short period of time. The Drive’s RMS Current Limit Circuit avoids this nuisance tripping while providing maximum motor protection.

If the motor is overloaded to 120% of full load (75% of the CL setting), the $I^2t$ Timer starts. If the motor continues to be overloaded at the 120% level, the timer will shut down the drive after 30 minutes. If the motor is overloaded to 160% of full load, the drive will trip in six seconds. See Section 11.6, on pages 22 and 23.

*UL approved as an overload protector for motors.
5. MOUNTING INSTRUCTIONS
The drive is designed with a NEMA 1/IP 50 enclosure for indoor use. It is recommended that the drive be mounted vertically on a flat surface with adequate ventilation. Leave enough room below the drive to allow for AC line, motor connections, and any other wiring that is required. Care should be taken to avoid extreme hazardous locations where physical damage can occur. When mounting the drive in an enclosure, the enclosure should be large enough to allow for proper heat dissipation so that the ambient temperature does not exceed 45°C (113 °F) at full rating. See Figure 2, on page 10. A mounting template is included to facilitate mounting of the drive.

⚠️ WARNING! Do not use this drive in an explosion-proof application.

6. ELECTRICAL CONNECTIONS
See Table 4, for terminal block wire and tightening torque specifications.

⚠️ WARNING! Read Safety Warning, on page 5, before using the drive. Disconnect main power before making connections to the drive. To avoid electric shock, be sure to properly ground the drive.

Application Note: To avoid erratic operation, do not bundle the AC line and motor wires with each other or with wires from signal following, start/stop contacts, or any other signal wires. Also, do not bundle motor wires from multiple drives in the same conduit. Use shielded cables on all signal wiring over 12” (30 cm). The shield should be earth grounded on the drive side only. Connect the drive in accordance with the National Electrical Code requirements and other local codes that may apply.

Be sure to properly fuse each AC line conductor that is not at ground potential. Do not fuse neutral or grounded conductors. A separate AC line switch or contactor must be installed as a disconnect so that each ungrounded conductor is opened. For fuse or circuit breaker rating, see Table 3, on page 9. Also see Section 6.1, below and on page 15.

The drive is designed with a removable cover. To open the cover, the two front cover screws must be removed. After mounting and connections, install and tighten the two front cover screws to 5 in-lbs (6 kg-cm). Do not overtighten.

</table>

6.1 AC LINE INPUT CONNECTION – Connect the single-phase AC line input to Terminal Block TB1 (Terminals “L1”, “L2”), as shown in Figure 7, on page 15.

The rated AC line voltage of the drive must match the actual AC line input voltage setting of Jumper J1. The drive is factory set for 208/230 Volt AC line input (Jumper J1 not installed). For 115 Volt AC line input, install Jumper J1 (supplied). See Section 7.1, on page 16.
GFCI Operation – Do not connect this drive to an AC power source controlled by a Ground-Fault Circuit-Interrupter. Special software is available for GFCI operation – contact our Sales Department.

AC Line Fusing – The drive does not contain line fuses. Most electrical codes require that each ungrounded conductor contain circuit protection. Do not fuse neutral or ground connections. It is recommended to install a fuse (Littelfuse 326, Buss ABC, or equivalent) or a circuit breaker in series with each ungrounded conductor. Connect the drive in accordance with the National Electrical Code requirements and other local codes that may apply to the application. Do not fuse motor leads. For the recommended fuse size, see Table 3, on page 9.

6.2 GROUND CONNECTION – Connect the ground (earth) wires from the AC line and motor to Terminal Block TB1 (Terminal “GND”). See Figure 7.

6.3 MOTOR CONNECTION – Connect the motor to Terminal Block TB1 Terminals “U”, “V”, “W”. See Figure 7. Motor cable length should not exceed 100 ft (30 m) – special reactors may be required – consult our Sales Department. Be sure Jumper J2 is set to the corresponding motor horsepower rating, as described in Section 7.2, on page 16.

Note: If the motor rotates in the incorrect direction, it will be necessary to disconnect the AC line and change the position of the jumper on CON2 from “F” to “R” or reverse any two motor leads.

6.4 RUN/FAULT RELAY CONNECTION – The Run/Fault Relay Output Contacts are located at TB2 and can be used to turn on or off equipment or to signal a warning if a fault has occurred or the drive is put into the Stop Mode*. See Figure 8. The Run/Fault Relay Contact status for various drive operating conditions is shown in Table 5, on page 16. Also see Section 7.5, on page 18.

Relay Contacts Ratings – 1 Amp at 30 Volts DC, 0.5 Amps at 125 Volts AC, and 0.25 Amps at 250 Volts AC.

*In order for the Run/Fault Relay to give “Stop Mode” indication, the optional Forward-Stop Reverse Switch Model No. 13E664 must be installed.
TABLE 5 – DRIVE OPERATING CONDITIONS & RUN/FAULT RELAY CONTACT STATUS

<table>
<thead>
<tr>
<th>Drive Operating Condition</th>

Notes: 1. Run Mode is selected with the optional Forward-Stop-Reverse Switch or with the jumper installed in CON2 (jumper installed in the “F-S” position for forward direction (factory setting) or jumper installed in the “R-S” position for reverse direction). 2. Stop Mode is selected using the optional Forward-Stop-Reverse Switch. 3. $i^2t$, Short Circuit, Undervoltage, Overvoltage.

7. SETTING SELECTABLE JUMPERS
The drive has customer selectable jumpers which must be set before the drive can be used. For the location of jumpers, see Figure 4, on page 12. Disconnect the AC line before changing position of Jumpers.

7.1 AC LINE INPUT VOLTAGE (J1) – The drive is factory set for 208/230 Volt AC line input (Jumper J1 not installed). For 115 Volt AC line input, install Jumper J1. See Figure 9.

FIGURE 9 – AC LINE INPUT VOLTAGE SELECTION$^1$

<table>
<thead>
<tr>
<th>208/230 Volt AC Line Input (Jumper J1 not Installed (Factory Setting))</th>
<th>115 Volt AC Line Input Jumper J1 Installed$^2$</th>

</thead>
<tbody>
<tr>
<td><img src="image1" alt="Diagram of AC Line Input Voltage Selection" /></td>
<td><img src="image2" alt="Diagram of AC Line Input Voltage Selection" /></td>
</tr>
</tbody>
</table>

Notes: 1. The drive is factory set for 208/230 Volt AC line input (Jumper J1 not installed). For 115 Volt AC line input, install Jumper J1 (supplied). 2. Jumper J1 is supplied in the hardware bag.

7.2 MOTOR HORSEPOWER (J2) – Set Jumper J2 to the corresponding position for the motor being used. See Figure 10.

7.3 AUTOMATIC OR MANUAL START AND RESET SELECTION (J3) – See Figure 11, on page 17.

7.3.1 WARNING! Automatic Start and Reset – Jumper J3 is factory set to the “AUTO” position to automatically start the drive when the power is applied and the On/Off AC Line Switch is set to the “ON” position. The drive will also automatically restart after an Undervoltage or Overvoltage Fault has cleared.

FIGURE 10 – MOTOR HORSEPOWER SELECTION

![Diagram of Motor Horsepower Selection](image3)
If an I2t or Short Circuit Fault occurs, the drive must be restarted by setting the On/Off AC Line Switch to the “OFF” position for a minimum of 5 seconds.

### 7.3.2 Manual Start and Reset*

In Manual Start Mode, the drive must be manually restarted, after a fault has cleared, using the optional Forward-Stop-Reverse Switch. If a Short Circuit or I2t Fault occurs, the drive can be restarted by setting either the On/Off AC Line Switch to the “OFF” position for a minimum of 5 seconds or setting the Forward-Stop-Reverse Switch to the “STOP” position.

*Note: The optional Forward-Stop-Reverse Switch must be installed in order to use the drive for Manual Start operation.

### 7.4 60 Hz OR 50 Hz MOTOR OPERATION AND DRIVE OUTPUT FREQUENCY (J4 AND J5)

Both jumpers must be set for the appropriate motor nameplate frequency rating.

#### 7.4.1 Setting the Drive for 60 Hz or 50 Hz Motor Operation

The drive is factory set to operate 60 Hz motors. Jumper J5 is factory set to the “60Hz” position. For 50 Hz motors, set Jumper J5 to the “50Hz” position, and be sure Jumper J4 is set to the “1X” position. See Figure 12.

#### 7.4.2 Setting the Drive for Two Times the Rated Motor RPM

The drive can also be used to operate the motor up to two times the rated RPM; however, constant horsepower will result when operating the drive in the “2X” mode above the motor rated frequency. See Figure 13.
For 120 Hz output with 60 Hz motor, set Jumper J4 to the “2X” position and be sure Jumper J5 is set to the “60Hz” position. For 100 Hz output with 50 Hz motor, set Jumper J4 to the “2X” position and set Jumper J5 to the “50Hz” position. See Figure 14.

<table>
<thead>
<tr>
<th>120 Hz Output with 60 Hz Motor (J4 Installed in “2X” Position)</th>

</tr>
<tr>
<td>J5</td>
<td>60HZ</td>
</tr>
</tbody>
</table>

7.5 RUN/FAULT OUTPUT RELAY OPERATION (J6) – Jumper J6 is factory set to the “RUN” position for “Run” operation of the Run/Fault Relay. For “Fault” operation of the Run/Fault Relay, set Jumper J6 to the “FLT” position. See Figure 15.

8. RECOMMENDED HIGH VOLTAGE DIELECTRIC WITHSTAND TESTING (HI-POT TESTING)

Testing agencies such as UL, CSA, VDE, etc., usually require that equipment undergo a hi-pot test. In order to prevent catastrophic damage to the drive which has been installed in the equipment, the following procedure is recommended. A typical hi-pot test setup is shown in Figure 16, on page 19. All drives have been factory hi-pot tested in accordance with UL requirements.

**WARNING!** All equipment AC line inputs must be disconnected from the AC power.

8.1 Connect all equipment AC power input lines together and connect them to the H.V. lead of the hi-pot tester. Connect the RETURN lead of the hi-pot tester to the frame on which the drive and other auxiliary equipment are mounted.

8.2 The hi-pot tester must have an automatic ramp-up to the test voltage and an automatic ramp-down to zero voltage.

*Note: If the hi-pot tester does not have automatic ramping, then the hi-pot output must be manually increased to the test voltage and then manually reduced to zero. This procedure must be followed for each machine to be tested. A suggested hi-pot tester is Slaughter Model 2550.*

**CAUTION!** Instantly applying the hi-pot voltage will cause irreversible damage to the drive which will void the warranty.

9. DRIVE OPERATION

9.1 START-UP PROCEDURE – After the drive has been properly set up (jumpers and trimpots set to the desired positions) and wiring completed, the start-up procedure can begin.

Note: This drive contains bus capacitors which must be reconditioned if the drive has been in storage for over one year. To recondition the bus capacitors, apply the AC line, with the main speed potentiometer set to zero, for a minimum of 30 minutes.

WARNING! The motor will run at the Main Speed Potentiometer setting when the AC line is applied.

To start the drive, set the On/Off AC Line Switch to the “ON” position. If the AC power has been properly brought to the drive, the Pilot Light will illuminate. If the optional Forward-Stop-Reverse Switch has been installed, set it to the “FWD” or “REV” position. The motor will begin to accelerate to the set speed. The PC board mounted “ST” and “OL” LEDs will indicate the drive status, as described in Sections 10.3 and 10.4, on page 21.

Note: If the motor rotates in the incorrect direction, it will be necessary to disconnect the AC line and change the position of the jumper on CON2 from “F” to “R” or reverse any two motor leads, and repeat the start-up procedure.

9.2 RESTARTING THE DRIVE AFTER A FAULT HAS BEEN CLEARED – The drive monitors four faults (Undervoltage, Overvoltage, Short Circuit (at the motor (phase-to-phase)), and Overload). The PC board mounted “ST” and “OL” LEDs will indicate the drive status, as described in Sections 10.3 and 10.4, on page 21. Also see Section 7.3, on pages 16 and 17, for Automatic or Manual Start and Reset selection with Jumper J3.

9.2.1 WARNING! Drive Set for Automatic Start and Reset (Factory Setting) – The drive will automatically restart after an Undervoltage or Overvoltage Fault has cleared (J3 set to the “AUTO” position). For an I^2t Fault, be sure the fault has been cleared before restarting the drive. Check the motor current with an AC RMS responding ammeter. Also, the CL setting may be set too low. See Section 11.6, on pages 22 and 23. For an I^2t or Short Circuit Fault, the drive must be restarted by setting the On/Off AC Line Switch to the “OFF” position for a minimum of 5 seconds.

9.2.2 Drive Set for Manual Start and Reset* – In Manual Start Mode, the drive must be manually restarted, after a fault has cleared, using the optional Forward-Stop-Reverse Switch. If a Short Circuit or I^2t Fault occurs, the drive can be restarted by setting either the On/Off AC Line Switch to the “OFF” position for a minimum of 5 seconds or setting the Forward-Stop-Reverse Switch to the “STOP” position.

*Note: The optional Forward-Stop-Reverse Switch must be installed in order to use the drive for Manual Start operation.

10. PILOT LIGHT AND DIAGNOSTIC LEDs

WARNING! Do not depend on the Pilot Light or the PC board mounted LEDs to no longer be illuminated as a guaranteed power off condition. Be sure the main power switch or circuit breaker is in the “OFF” position before servicing the drive.
10.1 PILOT LIGHT – Located on the front cover. The Pilot Light will illuminate orange when the AC line is applied to the drive and the On/Off AC Line Switch is set to the “ON” position.

10.2 POWER ON LED (ON) – Located on the PC board. The “ON” LED will illuminate green when the AC line is applied to the drive and the On/Off AC Line Switch is set to the “ON” position.

10.3 STATUS LED (ST) – Located on the PC board. The “ST” LED is a green LED, which provides indication of a fault or abnormal condition. The information provided can be used to diagnose an installation problem such as incorrect input voltage and drive output miswiring. It also provides a signal which informs the user that all drive and microcontroller operating parameters are normal. Table 6 summarizes the “ST” LED functions.

10.4 OVERLOAD LED (OL) – Located on the PC board. The “OL” LED is a red LED, which provides indication of an overload condition. Table 6, summarizes the “OL” LED functions.

### TABLE 6 – DRIVE OPERATING CONDITIONS & LED INDICATIONS

<table>
<thead>
<tr>
<th>Drive Operating Condition</th>
<th>LED and Flash Rate</th>
<th>Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal operation</td>
<td>ST (Green)</td>
<td>Slow Flash</td>
</tr>
<tr>
<td>Overload (120% – 160% Full Load)</td>
<td>Off</td>
<td>On²</td>
</tr>
<tr>
<td>I²t (Drive Timed Out)</td>
<td>Off</td>
<td>Quick Flash</td>
</tr>
<tr>
<td>Short Circuit</td>
<td>Off</td>
<td>Slow Flash</td>
</tr>
<tr>
<td>Undervoltage</td>
<td>Quick Flash³</td>
<td>On</td>
</tr>
<tr>
<td>Overvoltage</td>
<td>Slow Flash³</td>
<td>On</td>
</tr>
<tr>
<td>Stop</td>
<td>Off</td>
<td>On</td>
</tr>
</tbody>
</table>

**Notes:** 1. Slow Flash = 1 second on and 1 second off. Quick Flash = 0.25 second on and 0.25 second off. 2. When the Overload is removed, before the I²t times out and trips the drive, the “ST” LED will flash green and the “OL” LED will turn off. 3. In Manual Restart Mode, when the Undervoltage or Overvoltage condition is cleared, the “ST” and “OL” LEDs will flash red / (red and green) / green.

11. TRIMPOT ADJUSTMENTS

The drive contains trim pots which are factory set for most applications. See Figure 4, on page 12, for the location of the trim pots and their approximate factory calibrated positions. Some applications may require readjustment of the trim pots in order to set the drive for a specific requirement. The trim pots may be readjusted as described below.

**WARNING!** If possible, do not adjust trim pots with the main power applied. If adjustments are made with the main power applied, an insulated adjustment tool must be used and safety glasses must be worn. High voltage exists in this drive. Fire and/or electrocution can result if caution is not exercised. Safety Warning, on page 5, must be read and understood before proceeding.

11.1 MINIMUM SPEED (MIN) – Sets the minimum speed of the motor. The MIN Trimpot is factory set to 0% of frequency setting. For a higher minimum speed, setting, rotate the MIN Trimpot clockwise. See Figure 17.
11.2 MAXIMUM SPEED (MAX) – Sets the maximum speed of the motor. The MAX Trim pot is factory set for 100% of frequency setting. For a lower maximum speed setting, rotate the MAX Trim pot counterclockwise. For a higher maximum speed setting, rotate the MAX Trim pot clockwise. See Figure 18.

11.3 ACCELERATION (ACCEL) – Sets the amount of time for the motor to accelerate from zero speed to full speed. The ACCEL Trim pot is factory set to 1.5 seconds. For a longer acceleration time, rotate the ACCEL Trim pot clockwise. For more rapid acceleration, rotate the ACCEL Trim pot counterclockwise. See Figure 19.

Note: Rapid acceleration settings may cause the current limit circuit to activate, which will extend the acceleration time.

11.4 DECELERATION (DECEL) – Sets the amount of time for the motor to decelerate from full speed to zero speed. The DECEL Trim pot is factory set to 1.5 seconds. For longer deceleration time, rotate the DECEL Trim pot clockwise. For more rapid deceleration, rotate the DECEL Trim pot counterclockwise. See Figure 20.

Application Note – On applications with high inertial loads, the deceleration may automatically increase in time. This will slow down the rate of speed of decrease to prevent the bus voltage from rising to the Overvoltage Trip point. This function is called Regeneration Protection. It is recommended that for very high inertial loads that both the ACCEL and DECEL Trim pots be set to greater than 10 seconds.

11.5 SLIP COMPENSATION (COMP) – Sets the amount of Volts/Hz to maintain set motor speed under varying loads. The COMP Trim pot is factory set to 1.5 Volts/Hz, which provides excellent speed regulation for most motors. To increase the slip compensation, rotate the COMP Trim pot clockwise. To decrease the slip compensation, rotate the COMP Trim pot counterclockwise. See Figure 21.

The slip compensation may be adjusted as follows:

1. Connect an AC RMS ammeter in series with one motor phase.
2. Run the motor and set the unloaded speed to approximately 50% (900 RPM on 4-pole 1500/1725 RPM motors).
3. Using a tachometer, record the unloaded speed.
4. Load the motor to the nameplate rated current (AC Amps).
5. Adjust the COMP Trim pot until the loaded RPM is equal to the unloaded RPM.

The motor is now compensated to provide constant speed under varying loads.

11.6 MOTOR OVERLOAD (I^2t) WITH RMS CURRENT LIMIT (CL)* – Sets the current limit (overload), which limits the maximum current to the motor, preventing motor burnout and eliminating nuisance trips. The CL Trim pot is factory set to 160% of the drive rated current. To increase the current limit,
rotate the CL Trim pot clockwise. To decrease the current limit, rotate the CL Trim pot counterclockwise. See Figure 22.

Figure 23 shows the $I^2t$ Trip Time vs. Motor Overload. Also see Section 4.2, on page 13.

*UL approved as an electronic overload protector for motors.

**CAUTION!** Adjusting the current limit above 160% of the motor nameplate rating can cause overheating of the motor. Consult the motor manufacturer. Do not leave the motor in a locked rotor condition for more than a few seconds since damage may occur.

In order to ensure that the motor is properly protected with the $I^2t$ feature, it is required that the CL Trim pot be set for 160% of the motor nameplate rated current, as described on page 16.

*Note: This adjustment must be made within 6 seconds or an $I^2t$ Trip will occur.*

The current limit may be adjusted as follows:

1. Connect an AC RMS ammeter in series with one motor phase.
2. Set the CL Trim pot fully counterclockwise.
3. Adjust the speed setting to 30%.
4. Lock the motor shaft and adjust the CL Trim pot to 160% of the motor nameplate rated current.
DAYTON ONE-YEAR LIMITED WARRANTY

All Dayton® product models covered in this manual are warranted by Dayton Electric Mfg. Co. ("Dayton") to the original user against defects in workmanship or materials under normal use for one year after date of purchase. If the Dayton product is part of a set, only the portion that is defective is subject to this warranty. Any product or part which is determined to be defective in material or workmanship and returned to an authorized service location, as Dayton or Dayton's designee designates, shipping costs prepaid, will be, as the exclusive remedy, repaired or replaced with a new or reconditioned product or part of equal utility or a full refund given, at Dayton's or Dayton's designee's option, at no charge. For limited warranty claim procedures, see "Warranty Service" below. This warranty is void if there is evidence of misuse, mis-repair, mis-installation, abuse or alteration. This warranty does not cover normal wear and tear of Dayton products or portions of them, or products or portions of them which are consumable in normal use. This limited warranty gives purchasers specific legal rights, and you may also have other rights which vary from jurisdiction to jurisdiction.

WARRANTY DISCLAIMERS AND LIMITATIONS OF LIABILITY RELATING TO ALL CUSTOMERS FOR ALL PRODUCTS

LIMITATION OF LIABILITY: TO THE EXTENT ALLOWABLE UNDER APPLICABLE LAW, DAYTON'S LIABILITY FOR CONSEQUENTIAL AND INCIDENTAL DAMAGES IS EXPRESSLY DISCLAIMED. DAYTON'S LIABILITY IN ALL EVENTS IS LIMITED TO AND SHALL NOT EXCEED THE PURCHASE PRICE PAID.

WARRANTY DISCLAIMER: A DILIGENT EFFORT HAS BEEN MADE TO PROVIDE PRODUCT INFORMATION AND ILLUSTRATE THE PRODUCTS IN THIS LITERATURE ACCURATELY; HOWEVER, SUCH INFORMATION AND ILLUSTRATIONS ARE FOR THE SOLE PURPOSE OF IDENTIFICATION, AND DO NOT EXPRESS OR IMPLY A WARRANTY THAT THE PRODUCTS ARE MERCHANTABILITY, OR FIT FOR A PARTICULAR PURPOSE, OR THAT THE PRODUCTS WILL NECESSARILY CONFORM TO THE ILLUSTRATIONS OR DESCRIPTIONS. EXCEPT AS PROVIDED BELOW, NO WARRANTY OR AFFIRMATION OF FACT, EXPRESSED OR IMPLIED, OTHER THAN AS STATED IN THE "LIMITED WARRANTY" ABOVE IS MADE OR AUTHORIZED BY DAYTON.

PRODUCT SUITABILITY: MANY JURISDICTIONS HAVE CODES AND REGULATIONS GOVERNING SALES, CONSTRUCTION, INSTALLATION, AND/OR USE OF PRODUCTS FOR CERTAIN PURPOSES, WHICH MAY VARY FROM THOSE IN NEIGHBORING AREAS. WHILE ATTEMPTS ARE MADE TO ASSURE THAT DAYTON PRODUCTS COMPLY WITH SUCH CODES, DAYTON CANNOT GUARANTEE COMPLIANCE, AND CANNOT BE RESPONSIBLE FOR HOW THE PRODUCT IS INSTALLED OR USED. BEFORE PURCHASE AND USE OF A PRODUCT, REVIEW THE SAFETY/SPECIFICATIONS, AND ALL APPLICABLE NATIONAL AND LOCAL CODES AND REGULATIONS, AND BE SURE THAT THE PRODUCT, INSTALLATION, AND USE WILL COMPLY WITH THEM.

CONSUMERS ONLY: CERTAIN ASPECTS OF DISCLAIMERS ARE NOT APPLICABLE TO CONSUMER PRODUCTS SOLD TO CONSUMERS; (A) SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU; (B) ALSO, SOME JURISDICTIONS DO NOT ALLOW A LIMITATION ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU; AND (C) BY LAW, DURING THE PERIOD OF THIS LIMITED WARRANTY, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE APPLICABLE TO CONSUMER PRODUCTS PURCHASED BY CONSUMERS, MAY NOT BE EXCLUDED OR OTHERWISE DISCLAIMED. THIS LIMITED WARRANTY ONLY APPLIES TO UNITED STATES PURCHASERS FOR DELIVERY IN THE UNITED STATES.

WARRANTY SERVICE
To obtain warranty service if you purchased the covered product directly from W.W. Grainger, Inc. ("Grainger"), (i) write or call or visit the local Grainger branch from which the product was purchased or another Grainger branch near you (see www.grainger.com for a listing of Grainger branches); or (ii) contact Grainger by going to www.grainger.com and clicking on the “Contact Us” link at the top of the page, then clicking on the “Email us” link; or (iii) call Customer Care (toll free) at 1-888-361-8649. To obtain warranty service if you purchased the covered product from another distributor or retailer, (i) go to www.grainger.com for Warranty Service; (ii) write or call or visit a Grainger branch near you; or (iii) call Customer Care (toll free) at 1-888-361-8649. In any case, you will need to provide, to the extent available, the purchase date, the original invoice number, the stock number, a description of the defect, and anything else specified in this Dayton One-Year Limited Warranty. You may be required to send the product in for inspection at your cost. You can follow up on the progress of inspections and corrections in the same ways. Title and risk of loss pass to buyer on delivery to common carrier, so if product was damaged in transit to you, file claim with carrier, not retailer, Grainger or Dayton. For warranty information for purchasers and/or delivery outside the United States, please use the following applicable contact information:

Dayton Electric Mfg. Co.,
100 Grainger Parkway, Lake Forest, IL 60045 U.S.A. 1-800-Grainger
